

R. Fabiani, N. Masturzo, M. Nafissi, *The monument for the Hekatomnid basileis from Iasos.*

Reconstruction of a statuary monument for the Hekatomnids erected in the city of Iasos, thanks to the reunion of two elements of its base. The former was brought to light 2005 in the West stoa of the agora by the Italian Archaeological Mission in Iasos, the second, exhibited at the Istanbul Archaeological Museums, was hitherto “of unknown provenance”. An epigram honoring Idrieus engraved on the block from Iasos and the presence on the monument of Aba, Hekatomnos' sister, permits some important historical deductions.
